La finitura a poro aperto lascia trasparire le venature naturali del legno. Al tatto si percepiscono le irregolarità della superficie. Con la laccatura opaca o lucida, invece, la finitura appare omogenea e liscia. La cornice a poro aperto si pulisce con un panno morbido senza grattare, usando acqua tiepida e detergenti neutri. Il prezzo delle aste da 10 mm è molto più alto perchè il legno è ramin.	Finitura a poro aperto Nero opaco  19NERO	 31NERO	 42NERO	 51NERO	 61NERO Finitura a poro aperto
